

ProView™ FC/PC Connector Holder

FIBER END FACE INTERFEROMETER & MICROSCOPE

The ProView FC/PC Connector Holder is a replacement part for the NorthLab's ProView line of products to support inspection of non-angle polished FC/PC type connectors. Typically, the holder is pre-mounted on the base plate on delivery of the base unit.

The FC/PC connector is a fiber-optic connector with a 2.5 mm floating ferrule in a threaded body. A key is used to control the rotation when inserted.

The size of the area inspected is not determined by the connector holder but on which ProView base unit model it is mounted (see separate specification of each model).

Key Features

- Supports non-angle polished FC and FC/PC connectors
- Key used to control rotation when inserted
- Compatible with all ProView base unit models
- Replacement requires software recalibration

Technical Specifications

Dimensions:	33(w) x 29(D) x 33(H) mm
Weight:	0.03 kg
Type:	FC/PC
